ELSEVIER

Comput. Methods Appl. Mech. Engrg. 115 (1994) 395–396

Computer methods in applied mechanics and engineering

Contents Volume 115

Volume 115, Nos. 1–2, May 1994

Nonlinear free vibrations of composite plates
J. Argyris, L. Tenek and L. Olofsson 1

Derivation of an evolution model for nonlinearly elastic beams by asymptotic expansion methods
L. Alvarez-Vazquez and J.M. Viaño 53

A finite plate element for dynamic analysis of a cracked plate
M. Krawczuk and W.M. Ostachowicz 67

Modelling of hydrodynamics, heat and mass transfer processes on the basis of unsteady Navier–Stokes equations. Applications to the material sciences at earth and under microgravity
V.I. Poleshaev 79

Asymptotic justification of an evolution linear thermoelastic model for rods
L. Alvarez-Vazquez and J.M. Viaño 93

Optimal rectangular plate and shallow shell topologies using thickness distribution or homogenization
L.H. Tenek and I. Hagiwara 111

Modal characteristics of rotors using a conical shaft finite element
M.A. Mohiuddin and Y.A. Khulief 125

Necessary conditions to avoid numerical locking in singular perturbations. Application to arch equations
D. Chenais and M. Zerner 145

Stabilized finite element methods for steady advection–diffusion with production
I. Harari and T.J.R. Hughes 165

Book Review 193

Announcements 195

Volume 115, Nos. 3–4, June 1994

Damage 90: a post processor for crack initiation
J. Lemaitre and I. Doghri 197

How to render second order accurate time-stepping algorithms fourth order accurate while retaining the stability and conservation properties
N. Tarnow and J.C. Simo 233

Surface adhesive joint description with coupled elastic-plastic damage behaviour and numerical applications
U. Edlund 253

Projection schemes for one-point quadrature shell elements
T. Belytschko and I. Leviathan 277

An object-oriented approach for an effective formulation of multibody dynamics
A. Kecskeméthy and M. Hiller 287

Comparison between finite volume and finite element methods for an elliptic system arising in electrochemical engineering
J.-M. Fiard and R. Herbin 315

A *p*-extension of the symmetric boundary element method
S.M. Holzer 339

Intrinsic solution to the *n*-dimensional tensor equation $\Sigma_{r=1}^{m} \boldsymbol{U}^{m-r}\boldsymbol{X}\boldsymbol{U}^{r-1} = \boldsymbol{C}$
Guo Zhong-heng, Li Jian-bo, Xiao Heng and Chen Yu-ming 359

Optimal convergence properties of the FETI domain decomposition method
C. Farhat, J. Mandel and F.X. Roux 365
